### REQUIREMENTS

- ✓ IBM Notes/Domino 8+.

- ❖ Automatic Setup & Operation.
- ❖ Supports IBM Notes® Mail, Custom Applications & IBM Quickr™.
- ❖ Archives or Exports to NSF, XML, HTML, MHT, PDF, PST, Office 365™ and Microsoft Sharepoint®.
- ❖ Flexible, extensible and comprehensive functionality.
- ❖ Blends seamlessly into your Notes/Domino environment.
- ❖ Administrator or User Driven.

The Archiver for Notes is a native Notes Archiving and Exporting solution for IBM Notes Mail, Custom Applications and IBM Quickr.

The Archiver archives or exports Notes Mail, Applications, Quickr, Calendars, Tasks, Contacts & Journals to NSF, XML, HTML, MHT, PDF, PST, Office 365 and Microsoft Sharepoint.

The tool maintains itself and your production environment according to the options you specify (how to process data, how to manage housekeeping and designs, how to migrate native archives etc). It can even update its own design, informing you of bugfixes and updates after reinstallation.

Multiple criteria enable Administrators to archive or export data using a comprehensive range of settings, including Smart Quotas and Archive Rotation/Management.

Profiles are used to automate the addition, processing and expiry of multiple databases according to Directories or Groups, so you don't have to.

Discovery/Compliance searching across the environment is included, along with graphical reporting, multiple language support and easy handling of locally stored native archives.

Notes security and replication is preserved, with data being stored in standard formats - keeping your future IT directions open.

The Archiver for Notes provides automated functionality for Administrators, transparent archiving for Users, and effective results for Managers.
